SVR - Severn Valley Railway
SWR - Swanage Railway
UKRT- UK Railtours
VT - Vintage Trains
VSOE - British Pullman Company (Bath Travel)
WCR - West Coast Railway Co.

Headcode Amendments & Notes

Where two or more locos are present in a working, the following terms are used.

66054 + 66519 This means the locos were coupled together or known as Double Header (the old school people will know).

66054 tnt 66519 This denotes that the locos were top and tail on the train. One attached to the front and one attached on the rear.

* 0Z77 turning move from Swanage to Eastleigh to enable loco to be turned around the loop so it would be facing the correct way to take the head of a railtour on 30/05/10

** 5Z77 return of turning move to Swanage but also with part of Class 108 DMU (54504) after overhaul at Eastleigh works.

7O51 & 7V52 workings have been added into regular booked freight as from the start of the new working timetable these have been booked to run we think as extra service train. We believe its for the surfacing work for the Weymouth bypass, but are not 100% sure.
