Headcode Amendments
& Notes

Where two or more locos are present in a working, the following terms are used.

66054 + 66519 This means the locos were coupled together or known as Double Header (the old school people will know).

66054 tnt 66519 This denotes that the locos were top and tail on the train. One attached to the front and one attached on the rear.

7051 & 7V52 workings have been added into regular booked freight.

Updated 12th March 2011
